

NutriFUZE

METABOLITE PLUS

Metabolite Plus is a microbial soil and plant amendment that promotes accelerated microbial propagation and drives an increased level of microbial activity. This proprietary formula improves conversion of organic and inorganic fertilizers into plant available forms—enhancing plant nutrition and development. The resulting increase in available phosphorus can lead to the production of root hairs and root tips increasing the active absorptive surfaces feeding the plant.

Benefits of Metabolite Plus:

- Feed off carbohydrates from plant roots
- Produce enzymes
- Cycle soil organic matter
- Solubize phosphorus
- Compete with other strains of bacteria for nutrition

DIAMOND THRIVE

Diamond Thrive is a proprietary kelp formulation consisting of soluble complexes, plant extracts and amino acids that work in synergy to improve nutrient uptake and promote rapid root development. Increasing plant nutrient uptake with Diamond Thrive can improve plant vigor and its ability to withstand environmental stresses.

Ingredients work in synergy to:

- Regulate cytosolic pH
- Enhance carbon movement into the Krebs Cycle
- Promote nitrogen metabolism and amino acid biosynthesis
- Protect against oxidative stress
- Support osmoregulation

Benefits of Diamond Thrive

- Exceptional nutrient uptake, utilization & movement (Spec. Divalent Cations)
- Improved plant growth and recovery
- Enhanced root hair formation
- Increased tolerance to environmental stress
